The application has been amended as follows:

Claim 26, Line 26: Delete the phrase "and the quality control unit,"

Claim 70: An imaging system comprising:

an injector;

a multi-dose container to hold a multi-dose quantity of liquid radiopharmaceutical;

a dispensing station operable to extract individual doses of a radiopharmaceutical from the multi-dose container and distribute each individual dose to the injector and operably coupled to an imaging system, the dispensing station being mounted on wheels to be movable to and from the imaging system;

an ion chamber to measure radioactivity therein, the ion chamber fluidly coupled to the dispensing station;

a physiologic monitor operably coupled to the injector;

an imaging scanner operably coupled to the physiologic monitor and the injector; and

a computer system provided on the wheels, the computer system configured to calculate a target dosage for an individual dose based on at least one of a half-life of the pharmaceutical and a weight of the living subject, the computer system configured to control the dispensing station to withdraw an ~~amount~~ individual target dosage from the multi-dose container based on the target dosage and move the ~~amount~~ individual target dosage to the ion chamber, the ion chamber to measure a radioactivity of the ~~amount~~ individual target dosage in the ion chamber, the computer system configured to compare a measurement from the ion chamber to the target dosage to determine whether the ~~amount~~ individual target dosage in the ion chamber corresponds to the target dosage, the computer system configured to control the dispensing station to discharge the ~~amount~~ individual target dosage as an individual dose when the measurement from the ion chamber corresponds to the target dosage.

Claim 104: A portable medical radiopharmaceutical administration system comprising:

a moveable structure mounted on wheels to be moveable to and from an imaging system, the moveable structure including radioactivity shielding;

a multi-dose container to hold a multi-dose quantity of liquid radiopharmaceutical;

a dispensing station to receive the multi-dose container, the dispensing station having a pump system;

an ion chamber to measure radioactivity therein, the ion chamber being fluidly coupled to the multi-dose container, wherein the multi-dose container, the dispensing station, and the ion chamber are enclosed within the radioactivity shielding while moved on the moveable structure to and from the imaging system; and

a computer system provided on the moveable structure, the computer system configured to calculate a target dosage for an individual dose based on at least one of a half-life of the pharmaceutical and a weight of the living subject, the computer system configured to control the pump system to withdraw an ~~amount~~ individual target dosage from the multi-dose container based on the target dosage and move the ~~amount~~ individual target dosage to the ion chamber, the ion chamber to measure a radioactivity of the ~~amount~~ individual target dosage in the ion chamber, the computer system configured to compare a measurement from the ion chamber to the target dosage to determine whether the ~~amount~~ individual target dosage in the ion chamber corresponds to the target dosage, the computer system configured to control the pump system to discharge the ~~amount~~ individual target dosage as an individual dose when the measurement from the ion chamber corresponds to the target dosage.
